Resumo	This study explores the interplay between family bonds, attachment styles, emotional regulation, dark personality traits, and delinquent behaviors. We assessed 336 Brazilians (M = 24.61, SD = 8.30), using network analysis. Participants were assessed using the Proposed Specifiers for Conduct Disorder, Parental Bonding Instrument, Difficulties in Emotion Regulation Scale, The

Brazilian Adult Attachment Scale, The Short Dark Tetrad, and the Self-Report Delinquency Scale. Our findings suggest that attachment and family bonds influence emotional regulation, affecting delinquent behaviors. Dark personality traits are strong predictors of delinquent behaviors. We highlight the importance of early life experiences and personality in understanding delinquent and antisocial behaviors.
