Autor (es) USF Thaline da Cunha Moreira Rodolfo Augusto Matteo Ambiel   Autores Internacionais Programa de Pós Graduação Stricto Sensu em Psicologia   DOI https://doi.org/10.9788/TP2018.1-03Pt   Assunto (palavras chaves) Self-efficacy; career counseling; psychological assessment   Idioma Inglês   Fonte Título do periódico: Trends in Psychology ISSN: 2358-1883   Volume/Número/Paginação/Ano: 26/61/2018   Data da publicação Digital   Resumo Assessment in career counseling can involve various constructs, including that of career choice self-efficacy, which refers to one's belief in one's ability to engage in career decision-making activities. However, the literature is still incipient in relation to the assessment of the sources of self-efficacy for making career choices. Accordingly, the present study's aim was to develop the Career Choice Self-Efficacy Source Scale (Escala de Fontes de Autoeficácia para Escolha Profissional, or EFAEP; initials in Portuguese). The development process involved the formulation of the items as well as pilot data collection. Upon concluding the scale's developmental phase, we began data collection, which enjoyed the participation of 388 students between the ages of 14 and 19 years from public and private high schools in the state of São Paulo. In addition to the EFAEP, the students also responded to the Career Choice Self-Efficacy Scale (Escala de Autoeficácia para Escolha Profissional, or EAE-EP; initials in Portuguese). Principal component analysis was performed, and a three-factor structure exhibited the best fit, with Cronbach's alphas ranging between 0.81 and 0.73. Furthermore, al	Título
